Bevezetés

A 45/2003. (VII.18.) GKM – KvVM együttes rendelettel módosított 12/2002 (III.14.) GM-KöVIM-KöM együttes rendeletet, az új személygépkocsik üzemanyag-gazdaságossági és széndioxid kibocsátási adatainak közzétételéről rendelkezett. A módosítás pontosította a fogyasztók tájékoztatásának módjait, eszközeit, és alkalmazással kapcsolatos hatósági feladatokat. E rendelet értelmében a közzététel a Közlekedési Hatóság illetékességébe tartozik oly módon, hogy ellenőrzött típus adatokat adjon át az új járműveket forgalmazóknak, akik ezen adatokat valamennyi értékesítésre felkínált autójuk környezetében jól látható formában és helyen ismertetik vásárlóikkal.

Minden márkakereskedés kötelessége, hogy nemcsak saját járműtípusaik, hanem konkurenseik adataival is megismertessék a vásárolni szándékozók, melynek egyik módja az „internetes portál” központi helyen történő elérhetőségének és olvasásának biztosítása. A másik mód a hagyományos nyomtatott adatbázis, melyet szintén biztosítunk a márkakereskedőknek. Ezen adatok közzétételével, a rendeletalkotóval együtt közös célja hatóságunknak, hogy új gépkocsi vásárlásánál a gazdaságossági, biztonsági és kényelmi szempontok mellett a környezetvédelem fontosságára is felhívjuk a figyelmet. Nem tekinthető ellentmondásnak az, hogy a fogyasztási adatokat is a környezetvédelem mérőszámainak tekintjük, mivel úgy gondoljuk, hogy mindenki számára egyértelmű, miszerint 10 liter üzemanyag elégetésével több károsanyag kerül környezetünkbe, mint – mondjuk – 6 literrel. A továbbiakban kellemes időtöltést és jó döntést előkészítő „böngészést” ajánlunk táblázatainkban, mely a gyártóművek európai szabvány szerinti vizsgálati – mérési adatainak gyűjteményét jelenti.

Mire nem alkalmas ez az információ halmaz

Senki ne várja azt, hogy az általa megvásárolt új vagy már használt gépkocsijának fogyasztása a táblázatokban szereplő értékkel pontosan azonos legyen. A gyakorlatban a fogyasztás függ a vezetési stílustól, a közlekedési körülményektől és a jármű műszaki állapotától. A táblázatokban szereplő értékek meghatározott, nemzetközi előírásokban rögzített körülmények közötti fogyasztásokat jelentenek. Emiatt van lehetőség arra, hogy összehasonlítási alapot képezzenek a különböző járművek között.

Alkalmazott címek és jelölések

A melléklet táblázataiban megadott adatokat a hazai Általános Forgalombahelyezési Engedély (ÁFE) kiadásának alapjául szolgáló EU típusbizonyítványok feldolgozott adatbázisaiból vettük át.

Kereskedelmi név: Az egyes gyártmányoknál EU-ban is általánosabb és a köztudatban is elterjedtebb kereskedelmi nevet használjuk a variáns-verzió szerinti bontás helyett.

Motorkód: A gyártó által megadott motorazonosító kód, mely annak működési módjára, hengertérfogatára és teljesítményére utalhat.

CO₂–emisszió és fogyasztás: az EU előírás szerinti mért értékek.

Rövidítések:

5M – Fokozatváltó 5 fokozattal

6M – Fokozatváltó 6 fokozattal

2A – Automata 2 fokozattal

4A – Automata 4 fokozattal

5A – Automata 5 fokozattal

6A – Automata 6 fokozattal

7A – Automata 7 fokozattal

8A – Automata 8 fokozattal

9A – Automata 9 fokozattal

10A – Automata 10 fokozattal

FM – Fokozatmentes

HED – Hibrid elektromos Dízel

HEO – Hibrid elektromos Otto

Gáz – Tiszta gázüzemű

Legkedvezőbb fogyasztású személygépkocsik

A tájékoztató a személygépkocsik típusbizonyítványaiból nyert adatok alapján készült. Frissítésére minden év október 1-vel kerül sor.

Felöleli a 2023-as évben kiadott személygépkocsi Általános Forgalombahelyezési Engedélyeket, de nem tartalmazza az ennél korábbiakat. Előfordulhat, hogy a régebbi típusoknál a Kedves Olvasó esetleg jobb fogyasztási és CO₂ értékű járművet talál, ami a vizsgálati határidő intervallumból adódik.

Benzin üzemű személygépkocsik

	Gyártmány	Ker. név	Motorkód	Henger tf. (cm ³)	Kombinált fogyasztás (l/100km)	Kombinált CO ₂ kibocsátás (g/km)
1.	Citroen	C5 X	5G06	1598	1,05	24
2.	Citroen	C5 Aircross	5G06	1598	1,13	26
3.	DS	DS7	5G06	1598	1,13	26
4.	Mazda	Mazda 2 Hybrid	M15A	1598	3,8	85
5.	Toyota	Yaris Hybrid	M15A	1490	3,8	85

Gázolaj üzemű személygépkocsik

Üzemeltetési ajánlások a gépjárművezetők részére

Az elmúlt néhány év alatt, részben a kőolaj beszerzési árának folyamatos növekedése miatt, részben a környezetvédelem előtérbe kerülése miatt a gyártás és üzemeltetés területén fokozott figyelmet kapott az üzemanyag takarékoság és ezzel szorosan összefüggve a környezetkárosító hatások csökkentése.

Az üzemanyag-fogyasztás szoros összefüggésben áll a károsanyag kibocsátással. A takarékoság egyben a környezetvédelmet is segíti.

Az üzemanyag takarékoság lehetőségét a jármű alapkoncepciója meghatározza ugyan, de a jármű szakszerű használatával, rendszeres karbantartásával jelentős üzemanyag mennyiséget takaríthatunk meg.

Ebben szeretnénk néhány jó tanáccsal segíteni.

A jármű műszaki állapota, karbantartása

A jármű megfelelő műszaki állapotát a rendszeres ellenőrzéssel, az időszaksos szervizek elvégzésével biztosíthatjuk.

Tartsuk be a kezelési útmutatóban leírtakat, ahol számos, részünkre hasznos információt találhatunk. Vezetés közben figyeljük a jármű viselkedését, a motor működését. Magas alaplát, rángatás, rossz beállításra utal, ami többlet üzemanyag-fogyasztást eredményez.

A gépkocsi menet közbeni oldalra húzása alacsony gumibroncsnyomást jelenthet, ami a menetellenállást növeli.

A légszűrők megfelelő időközbeni cseréje, a rendszeres környezetvédelmi beállítás és vizsgálat mind az üzemanyag takarékoság irányában hat.

Üzemanyag takarékos vezetéstechnika néhány pontban

A motor indítása:

- a hideg állóhelyi üres járatás rövid legyen,
- a motort kímélő üzemeltetéssel kell melegen járatni.

A gépjármű gyorsítása:

- álló helyzetből a legalacsonyabb sebességfokozatból induljunk,
- a gyorsítás minden sebességfokozatban legyen intenzív,
- magasabb sebességfokozatba a maximális fordulatszám 2/3-ánál kapcsoljunk.

Haladás állandó sebességgel:

- az alsó határsebesség, a forgalmi körülmények és a szállítási feladat jellegének figyelembevételével a gépjármű sebességét a lehető legalacsonyabbra válasszuk,
- mindenkor a még alkalmazható legmagasabb sebesség- fokozattal haladjunk,
- alacsonyabb sebességfokozatba a maximális fordulatszám 1/2-énél, 1/3-ánál kapcsoljunk,

A gépjármű lassítása:

- kis lassítási igénynél a csökkentett gázadás helyett a lassítást később kell kezdeni és kigurulást kell alkalmazni,
- közepes lassítási igénynél motorféket kell alkalmazni,
- nagy lassítási igénynél a motorféket és a lábféket együttesen kell alkalmazni.

Gépjárművel történő várakozás:

A közúti közlekedés során a forgalomirányító lámpa, lezárt vasúti sorompó, vagy egyéb akadályoztatás következtében igen gyakran kerülünk várakozó helyzetbe, mikor a tüzelőanyag-felhasználást a motor alapjáratában történő járatásával vagy leállítással tudjuk szabályozni.

Gyakorlati tapasztalatok alapján az energia megtakarítás és a környezetvédelem érdekében 2-3 percnél hosszabb várakozás esetén a motor járatása értelmetlen.

Városi forgalomban történő közlekedés:

A városi forgalomban történő közlekedés során a változó üzemállapotok előfordulása az országúti közlekedéshez képest jelentősen megnő. Tehát a korábban tárgyalt gázpedálkezelés a sebességfokozatok alkalmazásának módja, a gyorsítások és lassítások végzése a tüzelőanyag-felhasználást nagymértékben befolyásolja. Városi közlekedés során alapvető szempont a forgalom áramlásához történő rugalmas alkalmazkodás, természetesen a biztonságos közlekedés és a közlekedési szabályok figyelembevételével.

A forgalom áramlásától alacsonyabb sebességgel történő közlekedés esetén zavarjuk a forgalmat. A mögöttünk jövő járművek rákényszerülnek az előzésre, azonban előzés után történő besorolásuk folyamán gyakori, hogy a szükséges hely, illetve követési távolság biztosítása érdekében kénytelenek vagyunk lassítani. A forgalom áramlásától nagyobb sebességgel történő közlekedés esetén tulajdonképpen állandó előzésben vagyunk, melyet a szembejövő forgalom akadályoztatása következtében szakítunk meg.

Ilyenkor következik be a gépjármű lassítása és a forgalmi áramlatba történő besorolása (a szembejövő forgalom útvonalának a biztosítása érdekében).

A forgalmi áramlattól mindkét eltérés kedvezőtlen, mivel a gyakori lassítások és gyorsítások a tüzelőanyag-többlet-fogyasztás mellett baleseti veszélyforrások hordozói.

Országúti forgalomban történő közlekedés:

Országúti közlekedés során normál körülmények között a városi forgalomhoz viszonyítva az akadályoztatások száma jelentősen csökken.

A tüzelőanyag-felhasználást tulajdonképpen a forgalmi viszonyokhoz való alkalmazkodás, a fékhasználat gyakorisága és a légellenállás energiaemésztő hatása következtében az utazási sebesség befolyásolja.

Hegymenet és lejtőmenet:

Az energiatakarékosság érdekében emelkedőre történő felmenet folyamán is mindig az alkalmazható legmagasabb sebességfokozatban közlekedjünk úgy, hogy a motor fordulatszáma a maximális fordulatszám $\frac{2}{3}$ értékét ne lépje túl. Amennyiben a fordulatszám teljes gázpedál benyomás esetén a max. fordulatszám $\frac{1}{3}$ értéke alá esik, kapcsoljunk vissza egy fokozattal a vonóerő növelése végett.

Meredek lejtőn való közlekedés esetén a gépjármű mozgási energiájának növekedését, illetve csökkentését, a biztonságos vezetéshez tartozó sebesség tartását, mindenkor a megfelelő sebességfokozatba visszakapcsolva motorfék, illetve kipufogófék együttes működtetésével biztosítjuk.

Az üvegházhatásról

Üvegházhatásnak nevezzük a légkör fokozódó hő visszatartó képességét. Más megfogalmazásban a Föld erőteljes felmelegedése annak következtében, hogy az atmoszféra anyagaiban az infravörös sugarak elnyelődnek.

A Nap szabad szemmel is látható sugárzása csaknem akadálytalanul éri el a Föld felszínét. A felmelegedő felszín a Naptól kapott energiát az emberi szem számára már láthatatlan, infravörös sugárzás formájában bocsátja vissza a világűr felé. A Földnek ez a hőmérsékleti kisugárzása abba a hullámhossz-tartományba esik, amelyben egyes légköri nyomgázok, pl. a vízgőz (H_2O), a szén-dioxid (CO_2), a metán (CH_4), a dinitrogén-oxid (N_2O), a halogénezett szénhidrogének (CFC), vagy az ózon (O_3) jelentős sugárelnyelő képességgel rendelkeznek. Az ily módon légkörben elnyelt energia megemeli a Föld-légkör rendszer hőmérsékletét. Mivel ehhez hasonló folyamat játszódik le a kertészeti üvegházakban, a fenti jelenséget légköri üvegházhatásnak nevezték el.

Az ember okozta üvegházhatás

A Föld légkörének összetétele sokat változott az elmúlt négy milliárd év során, főleg az élővilág evolúciójának eredményeként. Míg e változások hosszú idő alatt következtek be, az emberi tevékenységnek újabban jelentkező, másmilyen és gyors következményei vannak. A sarki jégminták mutatják, hogy a különböző üvegház-gázok kibocsátása a légkörbe lényegesen megnövekedett az ipari forradalom óta, de 1950 óta feltűnően. A metán töménysége megkétszereződött 1800 óta. A széndioxid-töménység majdnem 1/3-dal növekedett, az 1950-es évek óta pedig jóval 50% fölötti a növekedés. A fő ember -termelte üvegház-gázok nagyon különböznek élettartamukban és hőelnyelő képességükben.

A becsült hozzájárulásuk a növekvő "sugárzásos fűtéshez" az 1980-as évek során: 55%, CFC -k 24%, metán 15% és nitrogén-oxid 6%. Ötven éven belül azonban a metán lehet a fő üvegház-gáz, mert, ahogy az éghajlat melegszik, a kiterjedt, sark-közelitőzedszerű tundrák örök fagyja még több metánt engedhet fel. Messzebbre kell visszanéznünk a széndioxid történetében, melyet pl. a sarki jégtömbökbe zárt levegő mondhat el. Az emberiség történetének új, felgyorsult, energiaigényes szakasza a teljes energiafelhasználás százszoros növekedését vonta maga után 1800 óta. A növekedési arány 1950 óta emelkedik, kb. százszoros növekedést okozva az éves globális széndioxid-termelés mértékében.

A legfejlettebb országok kb. felét termelik a széndioxidnak, míg Kelet-Európa és a népes harmadik világ (elsősorban Brazília, Kína és India) a negyedét. A széndioxid-kibocsátás az elmúlt négy évtizedben, Ázsiában több mint tízszeresére nőtt. A mesterséges széndioxid-kibocsátás 3/4-e az ásványi tüzelőanyagok, főleg a szén égetéséből származik, de nagy mennyiségű a személy- és a tehergépkocsik kibocsátása is.

Az Európai Közösség célkitűzései

Mivel a légkörbe jutott üvegházhatású gázok újbóli megkötésére ma még nincs bejáratott technológia, az éghajlatváltozás visszafordítása csakis a fosszilis energiahordozók, a szén, a kőolaj, a földgáz használatának mérséklésével, az energiatakarékossággal, illetve a megújuló energiaforrások nagyobb kihasználásával lehetséges. A világ energiafogyasztása eközben napjainkban évi átlag 2%-kal nő, a CO₂-kibocsátás, ha nem is ennek megfelelő ütemben, de szintén folyamatosan emelkedik, folyamatosan növelve a légköri CO₂ koncentrációt.

Elsődleges feladat tehát az energiafogyasztás visszaszorítása, a termelés energiahatékonyságának növelése. Ezt szolgálja az energetika és ipar CO₂-kibocsátásának korlátozása, ami az ENSZ egyezmény célja.

A Tanács 2012. március 9-i következtetéseinek megfelelően az Unió és tagállamai azt is felajánlották, hogy egy átfogó és globális, a 2012 utáni időszakra vonatkozó megállapodás részeként 2020-ra az 1990-es értékekhez képest 30 %-kal csökkentik kibocsátásukat, amennyiben más fejlett országok is kötelezettséget vállalnak kibocsátásaik hasonló mértékű csökkentésére, és a folyamathoz a fejlődő országok is hozzájárulnak a felelősségüknek és képességeiknek megfelelő mértékben. Ez a felajánlás ugyancsak megjelenik a dohai módosításban.

A Párizsi Megállapodás

Az éghajlatváltozás olyan globális fenyegetést jelent, amely ellen a világ összes országának egymással együttműködve kell küzdenie. A világ vezetői 2015-ben ambiciózus új célokat fogadtak el az éghajlatváltozás elleni küzdelem terén.

A Párizsi Megállapodás a globális felmelegedés korlátozására irányuló cselekvési tervet tartalmaz. Ennek főbb elemei a következők:

hosszú távú célkitűzés – a kormányok abban állapodtak meg, hogy a globális éves átlaghőmérséklet emelkedését az iparosodást megelőző szinthez képest jóval 2 °C alatt tartják, és erőfeszítéseket tesznek annak érdekében, hogy az emelkedés mindössze 1,5 °C legyen

hozzájárulások – a párizsi konferencia előtt és alatt a részt vevő országok átfogó nemzeti éghajlat-politikai cselekvési tervet (ún. nemzetileg meghatározott hozzájárulást (NDC)) terjesztettek elő kibocsátásuk csökkentése érdekében

ambíció – a kormányok vállalták, hogy ötévenként közzéteszik cselekvési terveiket, és minden egyes tervben egyre ambiciózusabb célokat tűznek ki

átláthatóság – az átláthatóság és a felügyelet jegyében az országok vállalták, hogy tájékoztatják egymást és a nyilvánosságot arról, hogy miként halad a kitűzött célok elérése

szolidaritás – az EU tagállamai és más fejlett országok továbbra is hozzájárulnak a fejlődő országokban az éghajlatváltozás elleni küzdelem finanszírozásához mind a kibocsátások csökkentése, mind pedig az éghajlatváltozás hatásaival szembeni reziliencia fokozása érdekében

A Párizsi Megállapodás 2016. november 4-én lépett hatályba, miután teljesült az ehhez szükséges feltétel, azaz a világ üvegházhatásúgáz-kibocsátásának legalább 55%-áért felelős legalább 55 ország ratifikálta a megállapodást. Az EU összes tagállama ratifikálta a megállapodást.

Az üvegházhatás kialakításában szerepet játszó gázok részaránya

A legfontosabb üvegházgázokat az ember befolyásolja:

- széndioxid (CO_2) főleg szerves üzemanyagok égéséből származik.
- metán (CH_4) tehenek, birkák és más kérődzők bocsátanak ki, valamint rizsmezők, szeméttlerakók és olajrétegek.
- halogénezett szénhidrogének (CFC) hűtőrendszerekben, mint hűtőközeg, valamint habok és tisztítóanyagok tartalmazzák.
- troposzférikus ózon (O_3) főleg az iparból és közlekedésből származik.
- dinitrogén oxid (N_2O) talajokban a folyó mikrobiológiai tevékenység során képződik. A kibocsátás növekszik, ha a talajt trágyázzák.

Tisztelt új gépkocsi Vásárló!

Kérjük, hogy a gépkocsi vásárlás szempontjai között vegye figyelembe az autó üzemanyag-fogyasztását, s az azzal arányban álló káros anyag kibocsátását is. A kis fogyasztás közvetlen költségmegtakarítást jelent az Ön számára, s egyúttal környezetvédelmi jelentősége is van. Egyes nagyvárosok levegője már jelenleg is alkalmatlan a belélegzésre.

Gondoljon arra, hogy itt az idő minél több környezetbarát termékkel és szolgáltatással előrukkolni. Így van ez az autógyártásban és a járműkiszolgáló iparban is. Ma már egy új gépkocsi leendő tulajdonosa széles palettából választhat. Ehhez kívánunk kiadványunkkal információt, segítséget nyújtani.
